

TOP 2019 ARCHITECTURAL LIGHTING TRENDS

26 FEB TOP 2019 ARCHITECTURAL LIGHTING TRENDS

Posted at 08:19h in Architectural Lighting, Design by Gineico Lighting · 2 Comments

Each new year delivers an exciting array of innovative lighting architecture trends that will be seen everywhere in 2019. And it's not only about the fixtures but also the integration of lighting into the space it sits in making a striking impression.

Keep an eye on the latest innovations in lighting solutions from our industry leading Italian brands: [VeniceM](#), [Luciferos](#), [Fabbian](#), [Buzzi & Buzzi](#), [Melogranoblu](#) and [Antonangeli](#).

BUZZI & BUZZI

The smallest and most powerful downlight. The [Genius Collection](#) from [Buzzi & Buzzi](#) is a range of recessed trimless downlights that have a hole emission size of a \$2 coin – 20mm, equivalent to a traditional 100W light globe.

The [Genius](#) is powerful enough to light up a whale in a museum.

Small and powerful, the [Genius](#) featured in the image above is powerful enough to light up a whale in a museum!! Notice the consistent spread of light yet the emission hole is just a tiny 20mm?

Have you been challenged with lighting a timber lined area? Is the area too narrow? Buzz has solved this issue with the innovative lighting architecture with the very discrete **Genius Naked**. The 20mm emission hole sits behind the timber, stone or metal material and then produces a very powerful output of light.

The Leaf is a semi recessed fitting that becomes part of the ceiling or wall. Incredibly **easy to install**. Made from a patented material that can be set to any wall/ ceiling and covered in render, stucco, paint or wall paper. The Leaf is also available as the **Unleaf**, a recessed fitting.
