

## A SAFER AND CLEANER AIR WITH LIGHT

## A SAFER AND CLEANER AIR WITH LIGHT

AirCoral® is an exclusive Buzzi & Buzzi material, used for traditional forms of lighting revolutionising a safer and cleaner architectural light. AirCoral® is certified by the Tile Council of North America, for its eco-active, anti-polluting, anti-bacterial and photocatalytic properties. The material contributes to improving the quality of life of those living in installed areas, making the spaces healthier and safer. In addition it is distinguished by its bactericidal action against pathogenic agents carrying potentially serious diseases.

The Buzzi & Buzzi eco-friendly patented material also can break down pollutants encountered in the urban environment, such as Hexane, a toxic gas produced by the use of hydrocarbons for fuel and heating.

Buzzi & Buzzi is an Italian leader in the lighting sector, known for its strong innovative spirit and attention to the environment. Since 1990, Buzzi & Buzzi has created perfectly performing and functioning architectural lighting combined with attention to aesthetics. Buzzi & Buzzi ensures an ideal balance between beauty and efficiency, popular all over the world for its recessed luminaires of total disappearance. It has established itself both nationally and internationally thanks to its own and patented materials: CORAL®, AIRCORAL®, DURCORAL®, CORAL WATER OUT®.

AirCoral® was created on the basis of Coral®, the first material to be patented and today known to the sector for its incredible technical qualities and resistance to atmospheric agents, impacts, abrasions, weather and any kind of context. It is shock resistant, fireproof, customisable in architectural form.

The beautiful Art Deco inspired Angolo comes in 3 different shapes, perfectly fitting inside the intersection of two orthogonal walls, giving life to an indirect light.

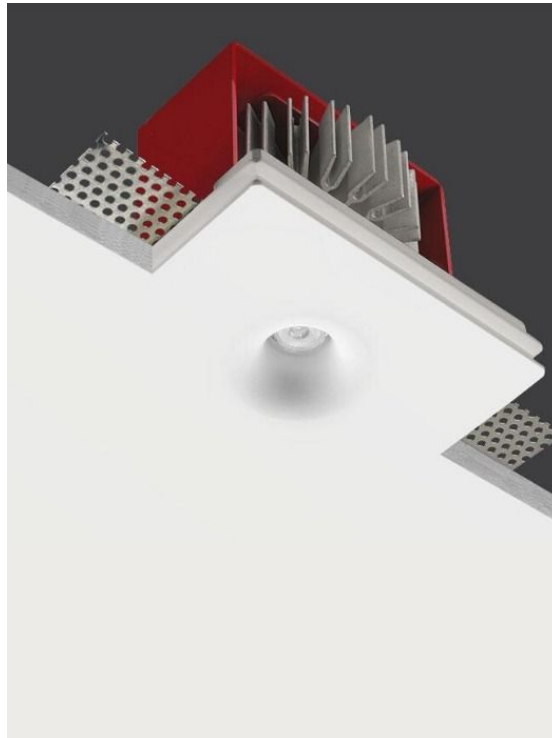

Even when the light is switched off, AirCoral® continues to work. The air is purified and spaces are healthier even without lighting, when the source is inactive. AirCoral® is the preferred luminaire for installation in public locations, such as health care structures, hospitals and clinics. Educational sectors, such as childcare centres, schools and universities, can benefit from the AirCoral® action, making the difference in terms of hygiene and well-being. The quality of life within private spaces is significantly improved thanks to the properties carried out by the material.

You can also measure the wellness level produced by AirCoral® by using this technically savvy and innovative [calculator](#). Select the product you would like to measure, specifying height of the compartment in centimetres, and it will give you a value of purified air in square metres.

**DEGRADATION  
OF POLLUTANTS**  
in crowded places

All Buzzi & Buzzi models made in Coral® can be manufactured, on request, in AirCoral®: characterised by a smooth and silky texture, it is best suited to multiple types of lighting projects, giving spaces an elegant and refined atmosphere.

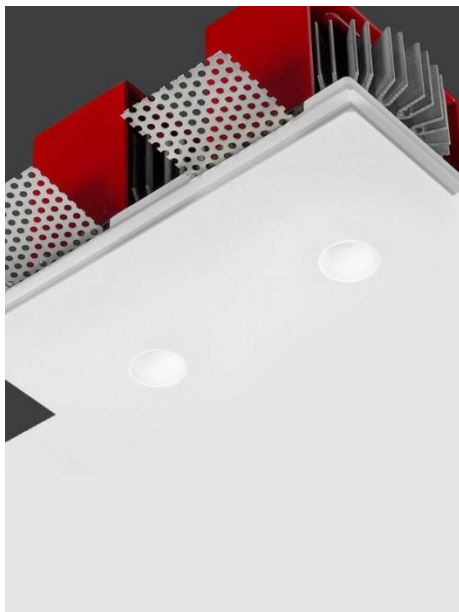

The Genius downlight is appears as a simple 20mm hole in the ceiling. The clever design delivers the same output as a full-sized downlight.

AirCoral® material was used for the outdoor lighting Minivirtus Wall helping to reduce the harmful effects of the major polluting agents, while the light is spread through what looks like a white stone material. This beautiful light is inert to moisture and salt so if you have commercial or domestic properties close to the sea this is perfect.

Do you have a particular need for a healthy environment?

The AirCoral® range is ideal for use in all domestic premises or commercial spaces – hospitals, health clinics, hotels, restaurants, Universities, schools, childcare centers and kindergartens.

The **Genius Twin Round** is a cost effective solution to double the intensity of light while totally disappearing into the ceiling, perfect for commercial and domestic spaces. The Genius Twin Round is a recessed luminaire for indoor spaces, made of AirCoral®.

The **Supernova** is a disappearing direct light recessed indoor luminaire made of AirCoral®, installable on plasterboard ceilings, perfect to enlighten architectural details. The 650mm rounded light hole creates a decisive light to enhance the plasticity of the ceiling.

#### Public spaces

AirCoral® is the ideal choice for luminaires installed in public spaces, typically more crowded: these areas contain double quantity of polluting, potentially dangerous for human health agents. The special material, which offer a satin finish for lighting solutions, ensures a healthier context.

The [Zen](#) Pendant is perfect for public spaces. The curved satin glass creates a suffused and consistent light. Zen has a white-painted ceiling case or with a recessed housing, that allows to place the driver in the false ceiling.
